(54) Title: USER INTERFACE AND METHOD OF VIEWING UNIFIED COMMUNICATIONS EVENTS ON A MOBILE DEVICE

Mobile Device 112

(57) **Abstract:** A method for viewing communications events on a mobile device which includes a user interface, a communications event handler, and a communications event database is disclosed herein. The communications event handler interfaces with the database and the user interface to provide a user of the mobile device with a communications event history associated with the correspondent of an incoming communications event. Additionally the communications event handler interfaces with the database and the user interface to provide a user of the mobile device with a communications event history for a specified correspondent. When a communication event is received, the communication events history associated with the correspondent is presented on the user interface. This gives the advantage that the user of the mobile device is able to determine the context of the communication event.
